**OUTAGE REPORT  
PALO VERDE NUCLEAR GENERATING STATION (PVNGS)  
PURSUANT TO DECISION NO. 69663**

PVNGS Unit 1 was manually shut down on October 22, 2007. The unit was required to be off-line to slope the steam supply bypass lines to the turbine-driven Auxiliary Feedwater Pump. The slope of the piping was adjusted and modifications were performed to add isolation valves in this steam line. Unit 1 was returned to service on November 3, 2007.

Replacement net fuel and purchased power costs incurred as a result of this outage were \$6.1 million. Off-system sales were reduced by 41,906 MWhs, with an associated lost opportunity sales margin of \$198,870.
